

LumenAI Enterprise Governance Suite

Executive one-pager | Production validated quality intelligence for audit readiness, CAPA execution, and governance visibility

Suite Status READY Production validated	Validated Modules 3 Audit, CAPA, Integration	Audit Checks 18/18 0 failed / 0 warnings	Audit Events 696 196 high-value events
---	--	--	--

Problem

Healthcare quality and sterile processing teams often manage audit findings, quality signals, evidence packages, and corrective actions across fragmented systems. This makes executive visibility, audit readiness, CAPA follow-through, and Power BI-ready reporting difficult to sustain.

Solution

LumenAI connects frontline quality evidence to enterprise governance. The validated pathway is: **Audit Signal - High-Value Event - CAPA Trigger - Owner Assigned - Corrective Action - Preventive Action - Governance Summary.**

Validated Product Modules

Audit Command Center	Centralized audit visibility, health validation, high-value event tracking, PDF/CSV/Power BI exports, data dictionary, toolkit ZIP, and portfolio evidence page.
CAPA Workflow	Converts audit signals into structured corrective and preventive action records with owner, due date, risk level, status, corrective action, and preventive action.
Audit-to-CAPA Integration	Governance bridge connecting audit visibility to accountable CAPA execution and executive oversight.

Production Proof Points

- Audit Command Center: healthy, 18/18 checks passed, 0 failed, 0 warnings.
- Audit activity: 696 audit events and 196 high-value events.
- CAPA Workflow: health endpoint validated, CAPA creation from audit signal validated, CAPA list/governance summary validated.
- Portfolio assets: Audit evidence page, CAPA evidence page, Governance Hub, Governance Summary page, Evidence Index, Release Notes, and Demo Readiness Locks.

Business Value

Audit readiness	Quality governance visibility	Corrective action follow-through
Preventive action tracking	Executive reporting	Power BI-ready evidence
Vendor accountability	High-value event monitoring	Operational risk visibility

Differentiation

LumenAI is differentiated by connecting sterile processing quality evidence to enterprise governance workflows. It does not stop at inspection or reporting; it creates a traceable path from signal detection to CAPA execution and leadership-ready evidence packaging.

Roadmap

Persist CAPA records in database; add CAPA status updates, overdue escalation, Power BI CAPA export, governance scorecard, vendor-specific CAPA analytics, Infection Prevention linkage, executive PDF summary, and role-based access.

Final statement: LumenAI Enterprise Governance Suite v1.0.0 is production validated, evidence backed, portfolio ready, demo ready, stakeholder ready, and investor ready.
